About Us

In 2018, LPC
Naturals started
talking to farmers.
After success with
thousands of acres and
numerous requests from
plant enthusiasts and sustainability
advocates, we developed the
Prime Superior product line.

IMPROVE PLANTS NATURALLY

At seeding is the best time to start. Repeat weekly with foliar.

Fungus lives within the plant.

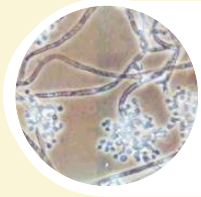

Plants have increased

- Germination,
- Root development,
- Stand establishment,
- Immune system,
- Nutrient uptake, and
- Yields

Seed Coat Coat and plant

PRIME SUPERIOR PRODUCTS

Active Ingredient
Our products contain living spores of the fungus *Beauveria bassiana*. The fungus lives within the plant.

Seed Coat Powder
Our graphite and talc powder adheres to the seed for same time spore and seed germination.

Clone Honey
Inoculation and cloning gel. Spores are within the honey.

Drench Spray
Easy application at the roots when transplanting, and throughout the plant's life on leaves.

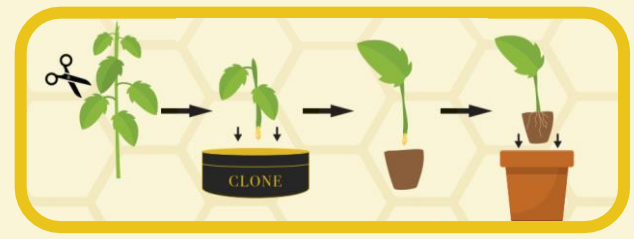

Drench Concentrate
Spores in soybean oil. After dilution in water, apply with your preferred watering equipment.

CLONE & FOLIAR APPLICATION

Clone

1. Stir
2. DIP
3. Plant

DRENCH CONCENTRATE

Mix 3mL per gallon

DRENCH

Shake and Spray
