**GROW WITH PRIME SUPERIOR
FIZZY BOMBS**

PRIMESUPERIOR.COM

GROWING WITH PRIME SUPERIOR FIZZY BOMBS

Prime Superior Fizzy Bombs are the most versatile product for the hemp/cannabis/house plant market.

No other products can benefit so many traits that are important to your grow. Fizzy Bombs set up a beneficial symbiosis early in the life of the plant and can improve: cannabinoid levels, terpene levels, root mass, yields, and more.

Fizzy Bombs will also kill insects, Spider Mites, and fungal diseases such as Powdery Mildew and Botrytis.

General Considerations

- Add 1 Fizzy Bomb to 1 gallon of water or nutrients.
- Water / spray plants within 48 hours of mixing.
- Do not store Fizzy Bombs in 90+ degrees or leave in direct sunlight.

TREATING CLONES OR SEEDS

SEEDS

1. Spray the seeds with a Prime Superior Fizzy Bomb dissolved in one gallon of water immediately after planting in either soil, rockwool or between filter paper.
2. Ensure that the seeds are wet.

CLONES

1. Make the Clones as usual using rockwool cubes or a cloning machine.

2. Upon transfer of the rooted clones to soil, spray the soil around the roots until wet with a Prime Superior Fizzy Bomb dissolved in one gallon of water
3. Upon transfer of the rooted clones to hydroponics, spray the leaves until wet with a Prime Superior Fizzy Bomb dissolved in one gallon of water.

MAINTENANCE

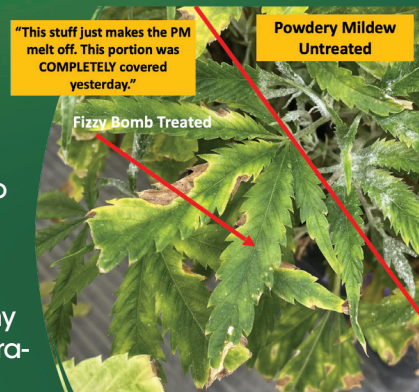

1. Every 7 days, spray the roots and leaves with a Prime Superior Fizzy Bomb dissolved in one gallon of water.
2. Spray or mist towards the end of the light period to minimize any effects of high temperature or UV light.
3. If you see any insects or diseases, immediately spray with a Prime Superior Fizzy Bomb dissolved in one gallon of water. Make sure that both the upper and lower surfaces of the leaves are wet.

INSECTS & DISEASES

The *Beauveria bassiana* fungus in Fizzy Bombs is extremely effective at killing insects, Spider Mites, and fungal diseases such as Powdery Mildew and Botrytis.

Simply add a Prime Superior Fizzy Bomb to one gallon of water. Spray or mist towards the end of the light period to minimize any effects of high temperature or UV light.

Repeat on days 2, and 3.
